# Capability statement

RS Enterprises is an India-based software delivery company with a delivery pipeline of 20+ engineers. We are the engineering delivery partner for digital agencies, consultancies and systems integrators. Woman-owned, registered in India.

## Partner model

- You keep the client relationship, project management, governance and architecture.
- We own a defined engineering workstream and deliver it under your process: your tools, repositories and rituals.
- We scale from a single engineer to a full delivery squad as the work needs.
- We work in English, with daily overlap with European business hours and US mornings or evenings.
- We never contact your clients directly.

## Capabilities

- **Drupal 10 and 11 builds, upgrades and migrations.** Builds, upgrades, migrations, custom modules and maintenance.
- **WordPress and headless CMS builds.** WordPress sites that editors run, and headless CMS set-ups.
- **Web applications (React, Next.js, TypeScript, Node.js).** React, Next.js and TypeScript front ends, Node.js back ends.
- **APIs and system integrations.** Documented REST APIs and system integrations.
- **Data platforms, dashboards, charts and maps.** Pipelines, warehouses, dashboards, charts and maps.
- **AI features and integrations.** AI features connected to the model provider your client chooses.
- **Accessibility (WCAG 2.2 AA) and QA, including test automation.** Audits and fixes, test plans, regression testing and test automation.
- **Hosting, maintenance and support.** Hosting, monitoring, backups and security updates, with written service levels.

## Engagement models

- **Fixed-price work package.** A defined scope, milestones and one fixed price.
- **Dedicated team.** Engineers who work on your projects full time, billed monthly.
- **Extra capacity.** Engineers who join a project you are already running, under your process.

## How we work

1. **Scope.** You share the work package. We reply with a written plan, team and price within 2 working days.
2. **Onboard.** We join your tools, repositories and rituals: Jira, Slack, Git and your stand-ups.
3. **Deliver.** Sprint delivery with code review, tests and weekly status, under your technical lead.
4. **Hand over.** Documented code, a clean handover, or ongoing maintenance under your contract.

## Selected projects

- **Website migration for an NGO in Delhi**: moved from a React app to WordPress so staff edit it themselves; every old address kept or redirected; Lighthouse accessibility 100.
- **Data platform and public API for a US analytics company**: joins 15+ outside data providers into one PostgreSQL warehouse of about 160 tables, with 50+ scheduled sync jobs and a documented public API.
- **Subscription analytics platform for a US company**: member accounts and online subscriptions, daily data from many sources, history views and an admin area; we host and support it in production.
- **Event website with registration and interactive content (Soul in Motion, India)**: an interactive chakra explorer and registration for a free live session on Zoom.
- **Drupal websites for organisations in India**: builds, upgrades and ongoing maintenance on Drupal.

Our engineers have contributed fixes to widely used open-source charting and mapping libraries, including Apache ECharts, nivo and Turf.
